

Non-compliant steel is a gamble that can lead to heavy losses.

- Whether you're an engineer, certifier, builder or supplier – using and signing off on non-compliant steel is simply a gamble that's not worth taking.
- If the integrity of your structure fails, loss of reputation and financial liability could just be the beginning of your problems.
- Building with steel that appears less expensive could also mean it doesn't comply with Australia/New Zealand Standards for construction.
- ACRS Certificates of Product Compliance help check compliance to Australian/New Zealand Standards and the Building Codes.
- How do you know your building or construction is safe if you don't know if the materials are compliant?
- Understanding how you can protect yourself is critical. You have the power to refuse to use non-compliant steel.
- So ask yourself this – is it worth building without a ACRS test certificate?

It's not a gamble worth taking.

Demand the ACRS Certificates of Product Compliance.
